

OneOption

THE SYSTEM

"Markets move, but winners move first."

In *The System*, Pete Stolcers shows how to find stocks that outperform or underperform the S&P 500 in real time, using Relative Strength and Relative Weakness to identify where institutions may be buying or selling.

Inside, you'll discover:

- **Pete's Core Process:** finding stocks with Relative Strength or Relative Weakness, and waiting for price action to confirm the trade.
- **Practical Guidance** for bullish days, bearish days, choppy price action, pullbacks, failed breakouts, and market transitions.
- **A Repeatable Workflow:** building watchlists, scanning for strong and weak stocks, planning entries, sizing positions, setting alerts, and managing exits.
- **Mindset and Trade Management:** lessons on patience, overtrading, drawdowns, cutting losses, holding winners, and reviewing mistakes without changing the method every week.

Whether you're learning to trade for the first time or refining your existing process, *The System* gives you a structured way to read the market, select the right stocks, and manage trades with a clear plan.
